Hey everyone,

Welcome to Day 5 of our Introduction to AI email course!

Yesterday, you saw exactly how Rowan (founder of The Rundown) uses AI daily to run an 8-figure media company reaching over 2M subscribers.

Today, we're going to help you build your own version of that.

Because here's the thing most people get wrong about AI implementation: they start with the tools instead of the tasks.

They download the latest trending tool, try it on random tasks, get mediocre results, and assume AI isn't that useful for their work.

The people who actually see massive productivity gains do the opposite. Before touching any tool, they identify exactly which tasks are eating up their time and figure out which of those AI can actually help with.

Today we're giving you a simple framework to do exactly that.

### The AI Workflow Audit: A 3-Step Process

#### Step 1: List your recurring tasks

Think about a typical work week and brain dump everything that takes up meaningful time:

- Emails you write regularly (follow-ups, updates, responses to common questions)
- Documents you create (reports, summaries, proposals, presentations)

- Research you conduct (competitor analysis, market research, finding information)
- Meetings you prep for or follow up on
- Data you organize, analyze, or move between systems
- Content you create (social posts, newsletters, documentation)

Write down 5-10 specific tasks. The more specific the better. For example, instead of "emails," write "responding to customer support tickets" or "writing weekly status updates to my manager."

## Step 2: Score each task using the "AI-Readiness" checklist

Not every task is equally suited for AI. Run each one through these four questions:

1. **Is it repetitive?** Do you do this more than once a week? The more frequently it happens, the bigger the payoff from improving it.
2. **Could you teach it to an intern?** If you could explain the task clearly enough for a new hire to do it (even if imperfectly), AI can probably help. If it requires years of specialized judgment that's hard to articulate, it's less suited.
3. **Is "good enough" acceptable?** Some tasks need to be perfect, others just need to get done. If a task would benefit from a solid first draft that you review and polish, that's an AI sweet spot.
4. **Do you dread it?** Tasks you avoid or procrastinate on are prime candidates. Even if AI only handles 80% of the work, getting past the blank page is often the hardest part.

Give each task a point for every "yes." Tasks scoring 3-4 are your highest-priority opportunities.

We put together a Notion template with 5 real examples so you can see how this looks in practice. Click [here](#) to access it and duplicate it to run your own audit.

| Task name                                       | Task description                                                                                                     | Is this task repetitive? | Could you teach it to an intern? | Is 80% accuracy acceptable? | Do I dread this task? | # AI-Readiness score | Priority |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|--------------------------|----------------------------------|-----------------------------|-----------------------|----------------------|----------|
| Organizing research notes                       | Collect scattered notes from articles, reports, and competitor analysis into structured summaries                    | Yes                      | Yes                              | Yes                         | No                    | 3                    | High     |
| Answer customer support tickets                 | Respond to customer inquiries, troubleshoot issues, and provide solutions via support portal                         | Yes                      | Yes                              | No                          | No                    | 2                    | Medium   |
| Weekly status update email                      | Write and send a summary of the week's progress, metrics, and upcoming priorities to stakeholders                    | Yes                      | Yes                              | No                          | No                    | 2                    | Medium   |
| Preparing slide presentations                   | Create slide decks for client pitches, internal reviews, or quarterly business updates                               | Yes                      | Yes                              | No                          | No                    | 2                    | Medium   |
| Draft announcement email for new product launch | Write a one-time announcement email to introduce our new AI course to the subscriber base, highlighting key features | No                       | Yes                              | No                          | No                    | 1                    | Low      |

## Step 3: Match high-scoring tasks to the right AI approach based on what we covered this week:

- **One-off or occasional tasks:** Prompt ChatGPT directly using the 6-step formula from [Day 1](#)
- **Tasks you do daily or weekly:** Build a ChatGPT Project ([Day 2](#)) so you're not starting from scratch each time
- **Multi-step workflows:** Combine tools into a repeatable process, like the ChatGPT + Gamma workflow from [Day 3](#)
- **High-volume, predictable tasks:** These are candidates for full automation (something we teach inside [AI University](#) but couldn't cover in email)

Start with one high-scoring task and get the workflow dialed in before moving to the next. Trying to AI-ify everything at once usually means nothing sticks.

## What comes next?

You've built a real foundation this week. But AI is moving fast, and the people who keep learning are the ones who stay ahead.

If you want to keep building your skill set beyond what we covered here, you can [try Rundown University free for 14 days](#).

You'll get access to 100+ step-by-step workflow guides, all of our AI certificate courses, live workshops, and a community of people on the same path.

No commitment, just 14 days to see if it's right for you.
